Notes

CBDV isolate for method development and minor-cannabinoid blends. Typically a white to pale crystalline solid. Varin series compounds are lower-abundance in most hemp chemovars. Lead times track biomass campaigns; request 5 g research cuts first.

This sheet states the specification for the SKU. Measured values — identity method used, assay, other cannabinoids, residuals, appearance, water activity and origin — are reported per lot on the certificate of analysis that ships with the material. Destination jurisdiction is required on every inquiry; some materials (THCV and isomer-adjacent species) require review before shipment.
